

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A ~~thrust member of a motor including a motor body which is shaped substantially cylindrical, and a rotary shaft which has a front end portion thereof sticking out from a front end face of the motor body, has a rear end face thereof exposed at a rear end face of the motor body, and which rotates with respect to the motor body, the thrust member comprising:~~

a cylindrical motor body comprising a hollow cylindrical stator, a front end plate, a front end face, and a rear end plate;

a rotor being fixedly attached to a rotary shaft wherein the rotary shaft has a front end portion that sticks out of the front end face of the motor body;

a thrust member which is formed by stamping and bending a metal sheet, the thrust member comprising:

a plurality of at least two arm segments attached to predetermined areas on an outer surface of the motor body;

a hump segment to touch the rear end face of the rotary shaft, the hump segment being shaped such that it prohibits the rotary shaft only from axially moving in a rearward direction when the thrust member is mounted on the motor with the arm segments being attached to the predetermined areas on the outer surface of the motor body; and

a plurality of at least two shoulder segments to bridge the arm segments and the hump segment and to urge the hump segment toward the rotary shaft.

2. (Currently Amended) The ~~thrust member~~ motor according to Claim 1, wherein the rotary shaft has a worm gear attached to the front end portion thereof.

3. (Currently Amended) The ~~thrust member~~ motor according to Claim 1, wherein the arm segments are attached to the front end face of the motor body.

4. (Currently Amended) The ~~thrust member~~ motor according to Claim 1, wherein the arm segments are detachably attached to the predetermined areas of the motor body.

5. (Currently Amended) The ~~thrust member~~ motor according to Claim 1, wherein the arm segments are fixedly attached to the predetermined areas of the motor body.

6-8. (Canceled)

9. (Currently Amended) The motor according to Claim [[6]] 1, wherein the thrust member receiving mechanism is provided at the front end face of the motor body.

10. (Original) The motor according to Claim 9, wherein the thrust member receiving mechanism is constituted by cutouts formed at the front end face of the motor body.

11. (Currently Amended) The motor according to Claim [[6]] 1, wherein the motor body has, at the outer surface thereof, an embossed guiding mechanism, to which portions of the thrust member are fitted.

12. (Currently Amended) The motor according to Claim [[6]] 1, wherein the motor body has, at the outer surface thereof, a recessed guiding mechanism, to which portions of the thrust member are fitted.

13-15. (Canceled)
